Jaffer Business Systems
(A Division of Jaffer Brothers Private Limited)

J Security Solutions:

The prevailing security conditions around the globe and particularly in our country are acting as an impediment to the development of the economy. Businesses are closing down every other day with the rise in security issues.

Realizing the need for security, Jaffer Business Systems has come up with an Enterprise Level Security Solutions designed to meet advanced security needs of the Corporate and Government security market.

Our consistent efforts through in-house research, development, prototyping and testing have led to the development of J Security Solutions that combines leading-edge technologies, and our specially designed and developed software along with our responsive customer services that gives you a solid competitive edge over other solutions available in the market place.

Solution Portfolio:

Scalable, Integrated Security Solutions

J Security Solutions is specialized in different security industry disciplines which enable it to offer an "end to end" solution for its clients. It has achieved multiple certifications, accreditations and awards from manufacturers and is regularly inspected by governing and regulatory bodies.

J Security Solutions provides an integrated security solution that includes:

Parametric Surveillance

Video Management System

Access Control System

Intrusion Detection System

Time Management System

Visitor Management System

Traffic Management System

Fleet Management System

Building Management System

Security Management System

Facility Management System

Parking Management System

Customized Security Solutions

Technical Analysis and Threat Assessment:

J Security Solutions offers a Technical Analysis and Threat Assessment. The Technical Analysis and Threat Assessment is designed to provide a full review of your organization's physical security applications, processes and procedures that manage your day to day security requirements.

Offered as a Professional Service, the scheme is fully insured and provides a cost effective alternative to expensive security consultancy fees.

As part of the process, we provide a full documented report of our findings which includes the following:

Stage No.1: Current State, Technology and Business.

Stage No. 2: Potential State, Collaboration.

Stage No. 3: GAP Analysis Assessment between Stages 1 & 2.

Stage No. 4: Recommend, Transform and Plan.

The Process:

Requirements Analysis:

Our team develops a detailed report of clients' requirements with their analytics on the possible advancements we can combine with the solution. This report serves the purpose of our objective statement for the solution to our clients.

Site Survey:

Our survey team visits the intended site for installation to have a detailed understanding of the requirements of the clients and a realistic plan of operations for an effective setup.

The Plan Layout:

The survey team develops the technical plan layout and adjoins their recommendations to the system layout. This leads to a comprehensive set of recommendations for the clients to maneuver with their requirements and have a system that gives maximum command and control.

Demonstration:

In order to ensure that we are on the same page with the client and have a thorough understanding of what their exact needs are, we provide them with the on-site/off-site demonstration of the system so that they get the feel of what is going to be delivered to them.

The Feedback:

We value our clients' feedback at every stage. Each process is conducted with the clients' involvement so that any of their queries or reservations, can be addressed.

Installation and Commissioning:

The deployment and commissioning of the desired solution at the clients' specific location begins and timely completion of the project with agreed milestones are ensured.

Training:

Training is provided to the clients' users so that they can fully understand the system and find it easy to operate.

Project Completion:

Once the training is done and the clients' users are in a position to run their system by themselves, the project is termed as completed and the client starts to reap the benefits of the new automated security solutions. J Security Solutions support services are also available to clients on call or annual basis.
